

CONNECTICUT COLLEGE

*The President's Report
2007 – 2008*

Dear Friends,

This has been an exciting year marked by many important milestones as our Connecticut College community joined together to advance our vision for the future. The successes we achieved in 2007-2008 further strengthened the foundation we laid in the prior year, and support our strategic vision of even greater academic excellence and recognition.

We pursued a very aggressive agenda in 2007-2008, and our achievements clearly indicate that we are focused on the right strategies for this College and for this time. Every day we see the impact of our efforts in the achievements of our students, in the dedication of our faculty, staff and trustees, and in the support of alumni and friends throughout the country and the world.

When we launch the public phase of our comprehensive campaign on October 25, we will bring together this strong extended community to celebrate our legacy and take a bold step toward our future. In this economy, it is more clear than ever that the kind of education we provide is extremely important because it prepares students to take on challenges the world has yet to see.

Connecticut College is an extraordinary institution. Our alumni are impacting the world, and our students are learning the critical thinking, analytical and leadership skills that will help them solve the most pressing issues of our time. As president, I am extremely pleased to share our successes with you as we continue to work together to raise the profile of Connecticut College as one of the finest liberal arts colleges in the land.

Sincerely,

Lee Higdon

David Canton, assistant professor of history, teaches a freshman seminar in the Jane Addams common room.

A Year of Achievement 2007–2008

AUGUST 2007

T H E C A M P A I G N F O R Connecticut College

EXCELLENCE IS A MOVING TARGET. For nearly 100 years, Connecticut College has been providing extraordinary education to students from all walks of life. As the world changes, the College must and will continue to evolve. We must ensure that the education we provide in our second century will be equally extraordinary. We will prepare our students for the unique challenges emerging in society today—and the still unknown challenges of tomorrow.

Through the Campaign for Connecticut College, we will build new connections and collaborations in the arts, humanities, sciences and social sciences. We will expand the scope of our innovative interdisciplinary centers. We will provide faculty with new support for research and teaching. We will equip students to solve complex problems from multiple perspectives.

We will further support academic excellence with four major initiatives:

Internationalization. We will bring international content to every course of study, and we will expand foreign language proficiency. We will create new ways for students to study abroad and new international experiences on campus. In this way, we will ensure that our students are prepared to thrive in a global society.

Residential education. We will renew the campus, renovate student spaces,

and develop new educational programming in the residence halls. In a small residential community, students learn by facing and resolving differences, participating in the governance of the College, and developing personal understanding of the Honor Code. Our students will take the skills of citizenship to a new level—a critically important capability in an increasingly complex world.

Science education. Many of society's most urgent dilemmas exist at the frontiers of science and technology. We will respond to this reality with a new life sciences building that will foster new student-faculty collaborations, more science research and interdisciplinary learning. In this way, we will ensure that our graduates can contribute to society's most critical decisions, whether as science and technology professionals or engaged, informed citizens.

Financial aid. Connecticut College was founded on the principles of inclusion and access to education. We will invest in financial aid to continue enrolling the best and brightest students regardless of economic background. Our investment will ensure that our student body represents the broadest possible diversity of cultures and life experiences, further enhancing our academic excellence.
